4. Filters and Patient Selection Criteria

JReview Module 1

Basics and Running Existing Reports

Module 1 Outline

- n Introduction

- n Basics/Navigation

 - .. Login

 - .. Review of the Interface (or user screens) and Reports

 - .. Run existing reports

 - .. Export reports to excel and open it

- n Demo

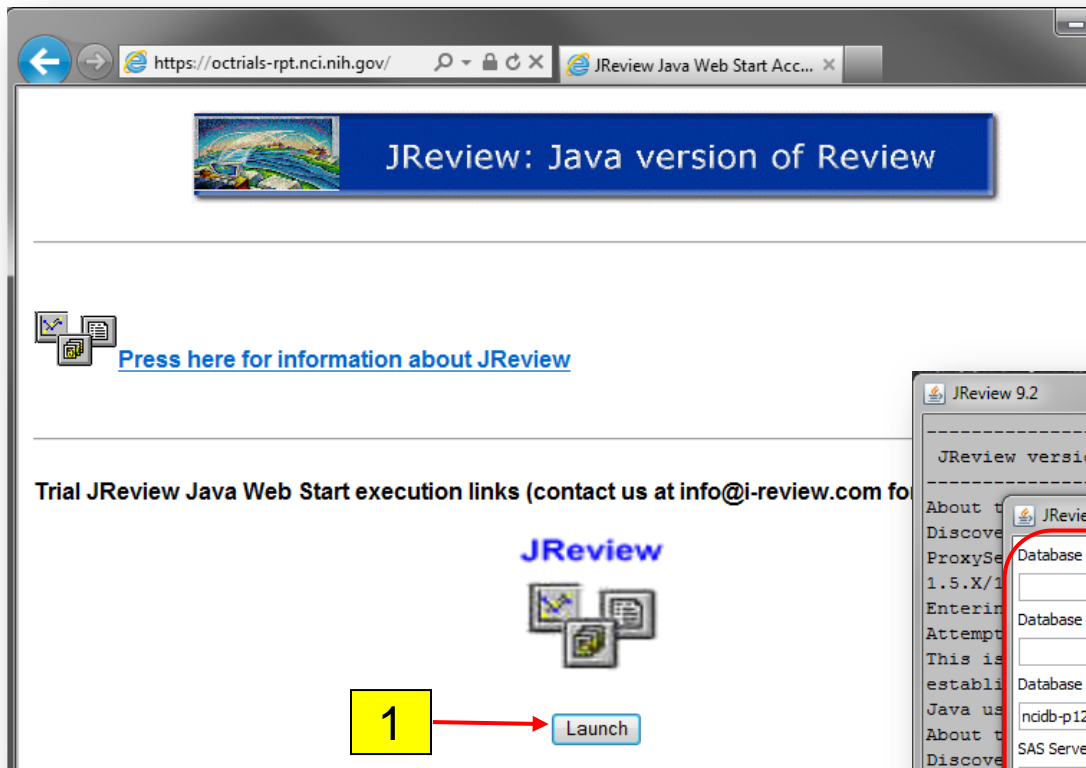

Introduction

- n JReview is the new version of I-Review ("Integrated Review")
- n Companion reporting tool in C3D family
- n Intuitive and user-friendly
- n Allows design of clinical data reports and to perform simple analyses
 - Only allows access to your C3D protocols and Sites
- n Java based application
 - Requires the Java Runtime Environment version 1.7.0_45 or later installed. Do not use version 1.8.xx
- n CCR JReview Reports Instructions/Manual
http://ccrintra.cancer.gov/clin_ops/C3D/iReview_instr.asp
- n Vendor's Manual
<https://ccrod.cancer.gov/confluence/download/attachments/72876079/JReview%20User%20Manual%209.2.6.pdf?api=v2>
- n CBT Training Manual
<http://octrails-train.nci.nih.gov/CBTsubmenu1.html>
- n Contact NCICB for problems/requests
 - 240-276-5541 (Toll free: 888-478-4423) or ncicbiit@mail.nih.gov

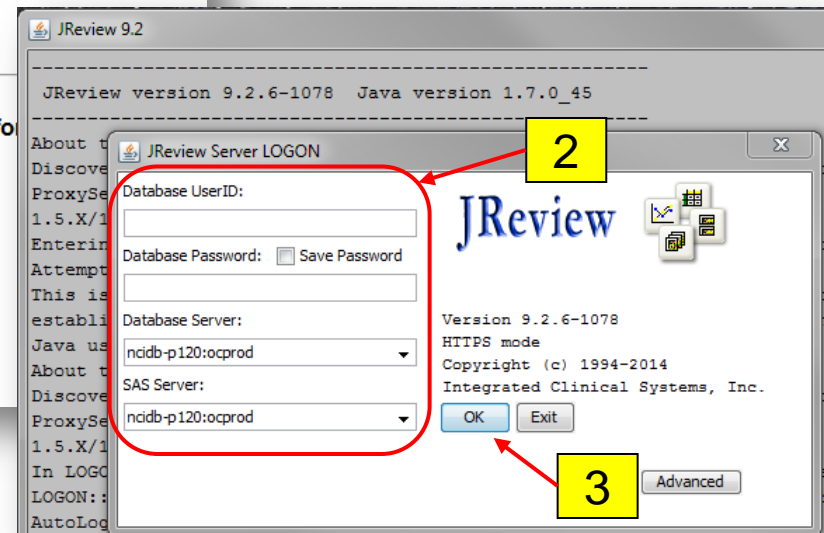

JReview Login

Go to the Login page:

<https://octrails-rpt.nci.nih.gov/>

1. Click on the **Launch** button;
2. Enter your C3D:
 1. **UserID**;
 2. **Password**;
 3. **ncidb-p120:ocprod** for the Database and SAS Servers;
3. Click on the **OK** button.

JReview Login

- n The following message is shown if an invalid C3D account and/or password is used:

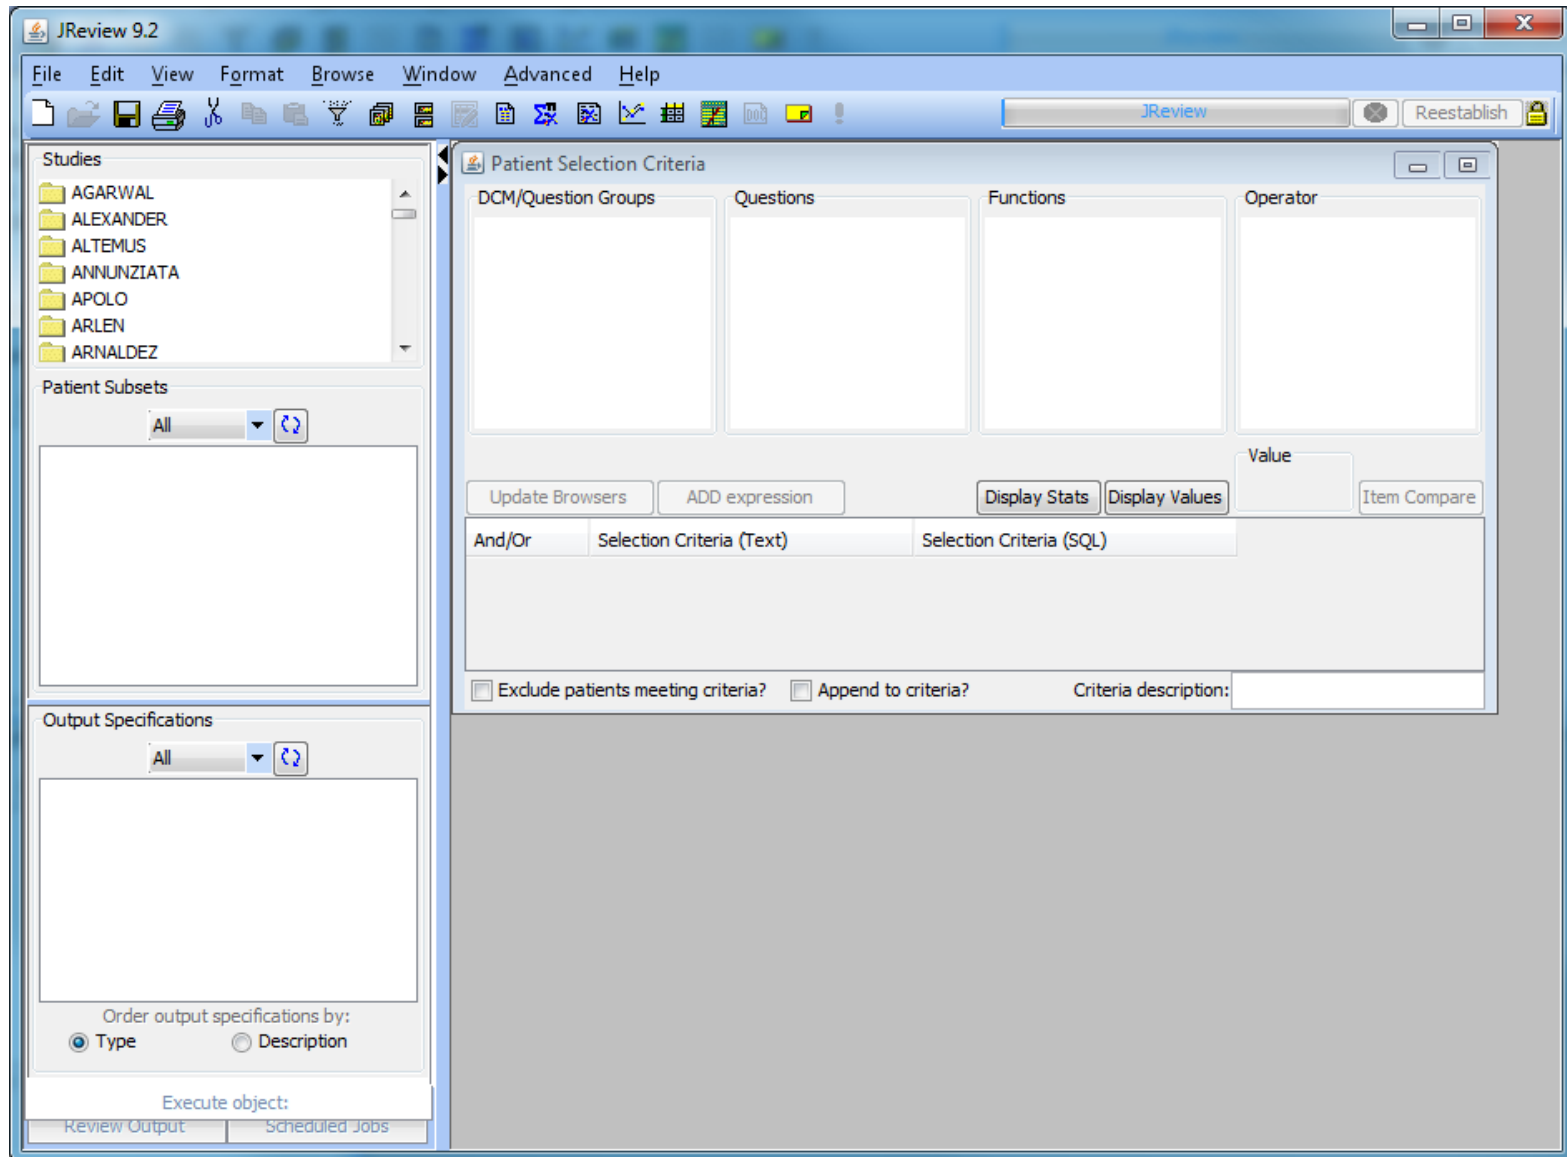

- n If your C3D password is about to expire (a warning is displayed when you log into C3D saying your password is about to expire in xx days), change your C3D password otherwise you will not be able to log into JReview and this message is displayed:

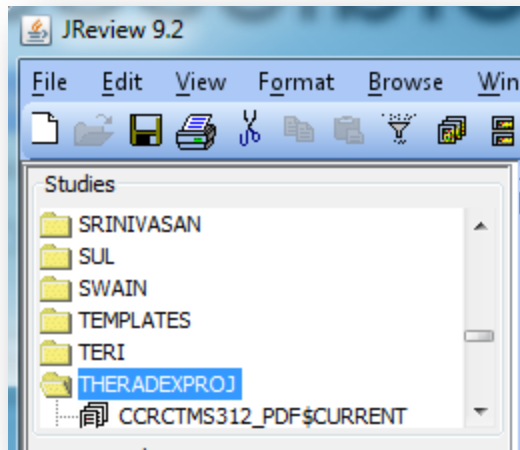

- n Three failed logins attempts will your C3D account just like in C3D RDC. You will have to contact the C3D Help Desk to have your account unlocked.

JReview Interface

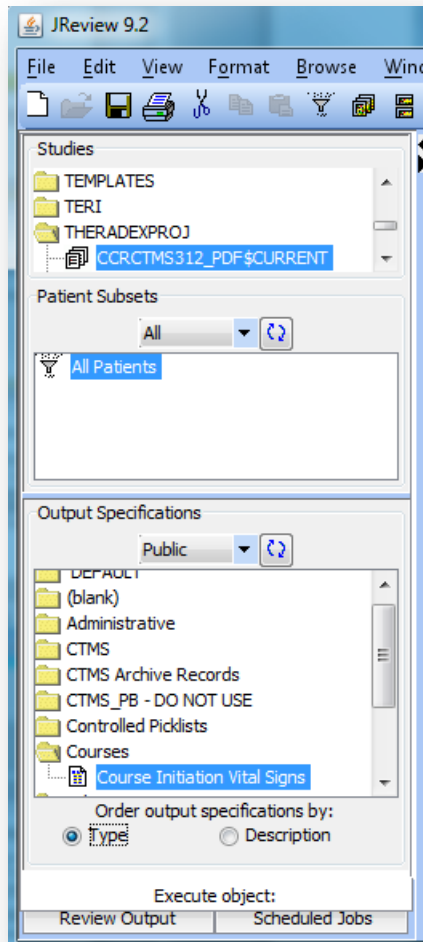

Accessible Studies

Studies you have access to

- Studies that you have access to are listed in a folder with the Principal Investigator's name. "**\$Current**" in name of the study indicates live data.

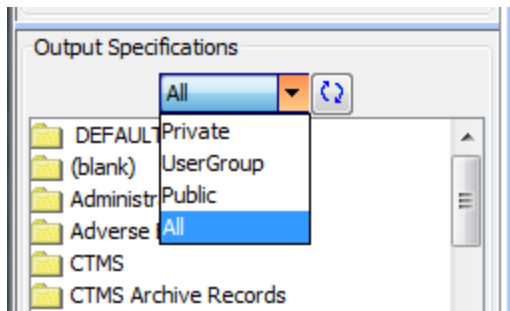

Saved Reports

- The Output Specification area lists the reports, saved by you and other users, that are available for the selected study.
- The reports are organized in folders.

Saved Reports

Output Specifications

- n Reports can be saved as **Private** or **Public**.
 - .. A Private report is only accessible by the user that created it.
- n Use the **Output Specification** drop-down to choose which reports to show:
 - .. Private – shows only reports created by you and available to you in the study;
 - .. Public – shows reports available to anyone with access to the study (even reports saved by other users);
 - .. All – same as Private and Public combined.

Execute a Saved Report

The screenshot shows the JReview 9.2 software interface. The 'Studies' list on the left contains several entries, with 'CCR_ROS_2011_V1\$CURRENT' selected. The 'Patient Subsets' section shows 'All Patients' selected. The 'Output Specifications' section shows 'All' selected, and the 'Template Reports' list contains 'All AEs - V5 - TEMPLATE REPORT' selected. The 'Report Output' table displays the following data:

Study	Patient	Visit #	Sub Visit	DCM Subset	Repeat #
CCR_ROS_2011_V1	1010001	170	0	1	1
CCR_ROS_2011_V1	1010001	170	0	1	2
CCR_ROS_2011_V1	1010002	170	0	1	1
CCR_ROS_2011_V1	1010003	170	0	1	2
CCR_ROS_2011_V1	1010003	170	0	1	1
CCR_ROS_2011_V1	1010004	170	0	1	1
CCR_ROS_2011_V1	1010004	170	0	1	2
CCR_ROS_2011_V1	1010004	170	0	1	3
CCR_ROS_2011_V1	1010004	170	0	1	6
CCR_ROS_2011_V1	1010004	170	0	1	5
CCR_ROS_2011_V1	1010004	170	0	1	7
CCR_ROS_2011_V1	1010004	170	0	1	1
CCR_ROS_2011_V1	1010004	170	0	1	4
CCR_ROS_2011_V1	1010005	170	0	1	1
CCR_ROS_2011_V1	1010006	170	0	1	3
CCR_ROS_2011_V1	1010006	170	0	1	2

Four numbered yellow boxes with red arrows indicate the steps: 1 points to the selected study, 2 points to the 'All' patient subset, 3 points to the selected template report, and 4 points to the 'Execute object' button. A yellow box labeled 'Report Output' points to the table.

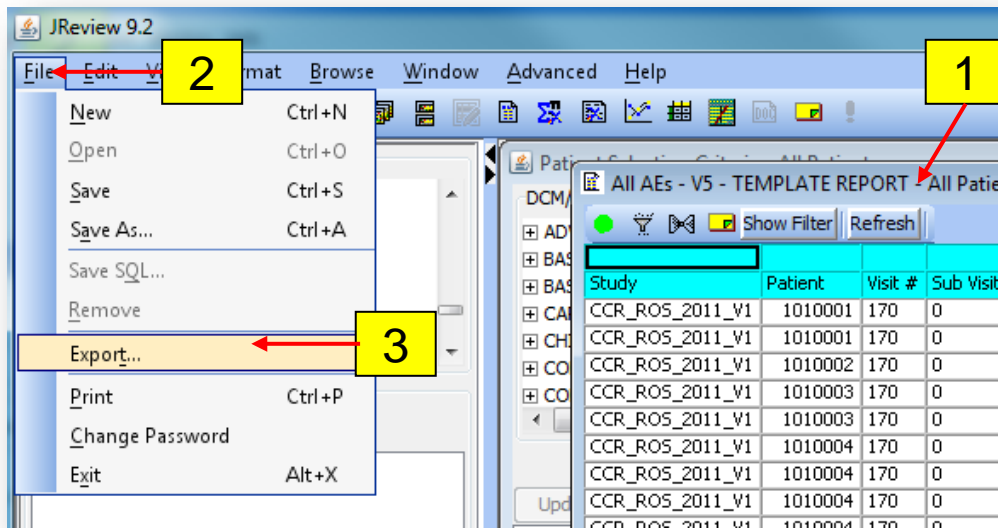

To Execute an Existing Report

1. Click on folder with the PI's name and click on the desired study (use \$CURRENT for live production data);
2. Optionally, change the Output Specification drop-down to Private or Public;
3. Double-click on folder to open and list the reports in it;
4. Double-click on the name of a saved report to execute it.

The report executes for a few seconds and the output will be presented in a separate tab labeled with the report title.

Note: Lab reports on studies with a lot of lab data can take a few minutes to execute.

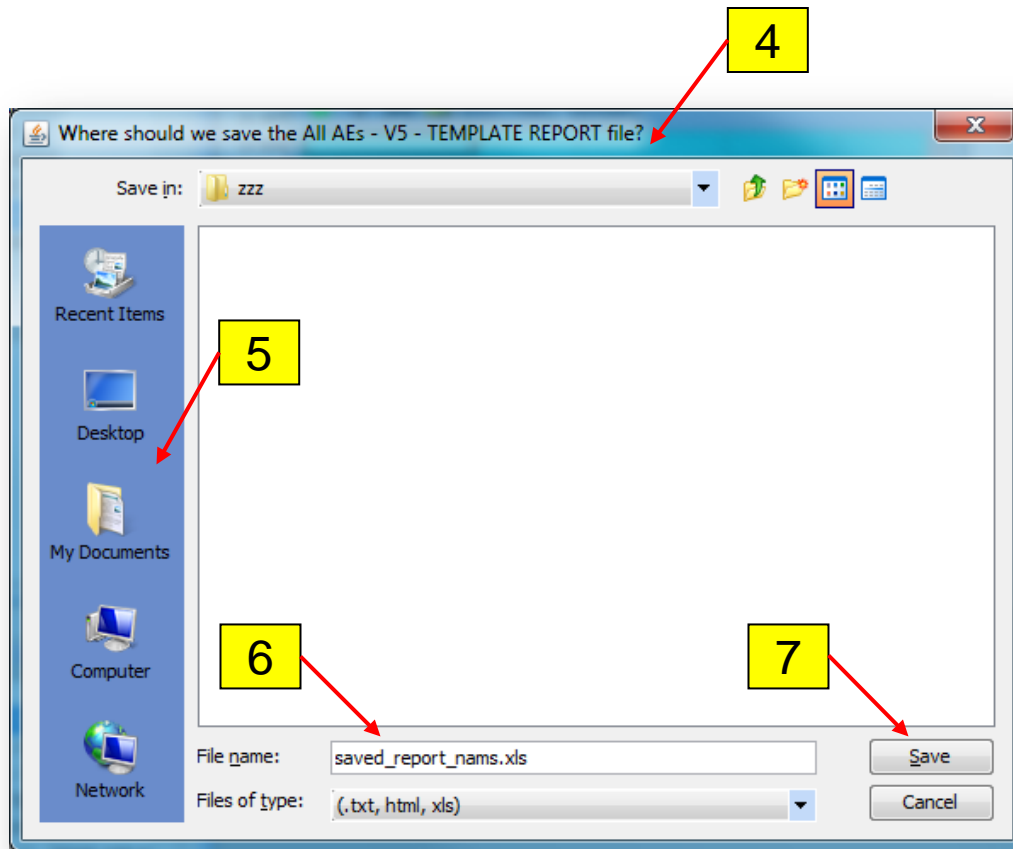

How to Export Reports

Once a report has completed executing:

1. Click on the **Report Output** window;
2. Click on **File** menu item;
3. Select the **Export** menu option;

How to Export Reports

4. Save dialog window will appear;
5. Select a **location** (desktop, my documents..) to save the report;
6. Enter a **file name** with extension (use **.xls** for spreadsheets, **.txt** for text files);
7. Click **Save** button.

CCR JReview Manual

- n Link to JReview Manual:

https://ccrod.cancer.gov/confluence/download/attachments/72876079/IReview%20Reports_v3.0_manual.pdf?version=1&modificationDate=1319117587187&api=v2

- n General Instructions on how to execute saved reports, export output, customize saved reports, create your own reports, set filters and save report.

- n Catalog of template reports that can be used as is or as a starting point for your own custom reports.

- n Since studies have their peculiarities and sometimes deviate from the CCR Standard eCRFs, some of the saved template reports might contain items that are not applicable to a study. JReview shows a prompt indicating which items are not compatible and remove them from the report. If the item exists in the study, it most likely has a different name, but it still can be added to the report. Module 2 covers modifying reports.

Module 1 Demo

n DEMO

C3D Oracle Clinical Terminology

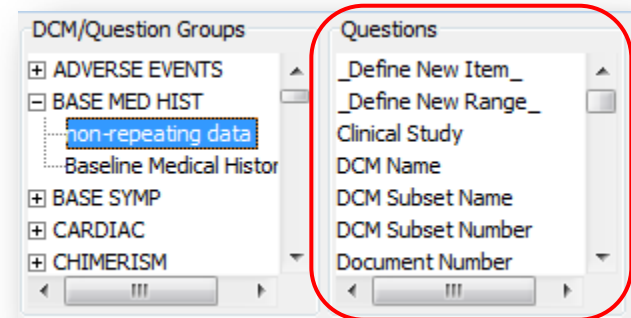

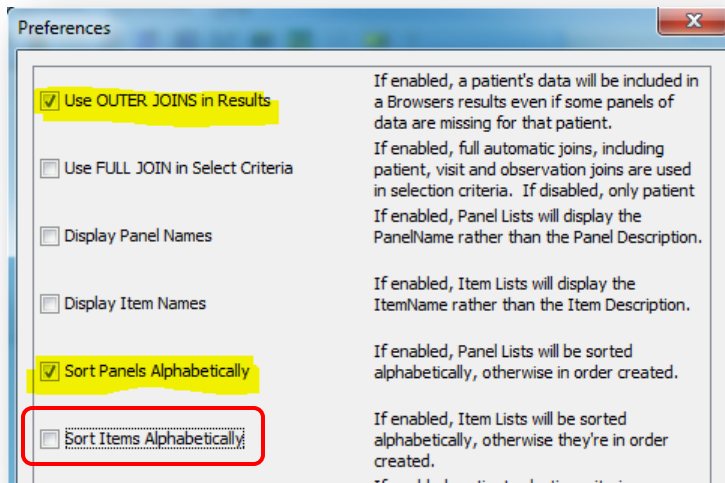

- n **DCI** – Data Collection Instrument (i.e. a CRF!)
- n **DCM** – Data Collection Module (Section or "Tab" of a CRF.)
- n **Question** – a single element of a CRF in which datum ("Response") is entered.
- n **Non-repeating Question Group** – A group of Questions that occurs once – ex: Course Initiation CRF.
- n **Repeating Question Group** - A group of Questions that occurs more than once – ex: Adverse Events CRF.

Changing Preferences

Default

Recommended

Setting "Preferences"

- n Edit JReview Preferences to change the order the **DCM/Question Groups** and **Questions** are listed.
- n To change preferences:
 1. Click on **Edit** menu item;
 2. Select **Preferences** menu option;
 3. Click on check boxes to enable or disable preferences - See recommendations on previous slide.

C3D and JReview Correlation

The image shows a screenshot of the JReview software interface with several yellow callout boxes and red arrows pointing to specific elements. The interface is divided into several sections:

- Top Section:** Patient information including "Patient 1010001 Page 4 (Medhist for Screening) Page 1 of 1, Repeat 6 of 18.", "Visit Date 19-Apr-2010", and buttons for "Bmeh" and "COM". A yellow box labeled "DCMs" points to the "COM" button.
- Baseline Medical History Section:** A section titled "BASELINE MEDICAL HISTORY". A yellow box labeled "Non-Repeating Group" points to this section.
- Table Section:** A table with columns "Body System", "Finding Results", and "Medical History If Abnormal".

Body System	Finding Results	Medical History If Abnormal
H/E/E/N/T	N	
NECK	N	
RESPIRATORY	N	
CARDIOVASCULAR	N	
GASTROINTESTINAL	N	
MUSCULOSKELETAL	A	Back pain
DERMATOLOGIC	N	

A yellow box labeled "Questions" points to the "Finding Results" column.
- Right Panel:** A "Patient Selection Criteria - All Patients" panel with a list of categories and sub-items. A yellow box labeled "Repeating Group" points to the "BASELINE MEDICAL HISTORY" item in the list. Another yellow box labeled "Questions" points to the "Questions" sub-section on the right side of the panel.

Red arrows indicate the following correlations:

- From "COM" button to "DCMs" box.
- From "BASELINE MEDICAL HISTORY" section to "Non-Repeating Group" box.
- From "Finding Results" column to "Questions" box.
- From "BASELINE MEDICAL HISTORY" item in the list to "Repeating Group" box.
- From "Questions" sub-section to "Questions" box.

C3D: F1 & Field Help Function

- n Displays Oracle Clinical question name and default prompt for selected data point.
- n Useful in finding out the question's **Default Prompt** as it appears in JReview.
 1. Click on a specific data point on eCRF in C3D:
 - a) On RDC Onsite studies, press the mouse's right button and select the "Field Help" option;
 - b) On non RDC Onsite studies, press the keyboard F1 key.
 2. A pop-up window appears and shows the data point's question name and default prompt .

Report definition in Report Browser

The screenshot shows the 'Output Specifications' window with a tree view of 'Template Reports'. A right-click context menu is open over the selected item 'All AEs - V5 - TEMPLATE REPORT'. The menu options are: Open, Open version..., Remove, Properties, and Schedule. Below the tree view, there are radio buttons for 'Order output specifications by: Type' (selected) and 'Description'.

The screenshot shows the 'Report Browser [Object:42802]' window. It has a list of report types on the left, including 'Detail Data Listing', 'Summary Listing', 'Formatted Detail Data List', 'Formatted Summary List', and 'Patient Visit Data Report'. To the right, there are sections for 'DCM/Question Groups' and 'Functions'. Below the list, there are buttons for 'Data Highlighting', 'Custom Join', 'Add Item', 'Add All I...', 'Filter Output', and 'Create ...'. A 'Header' section shows 'Adverse Events -V5'. Below that, there are checkboxes for 'Show Details?', 'Suppress duplicate ...', 'Enable Edi...', 'Mark New...', and 'Autosize ...'. At the bottom, there is a data table with columns 0 through 7.

Sort Order		1		
Row results				
Warn -Low				
Warn -High				
Panic -Low				

1. Click on the cell with a number above the column to remove
2. Select the **Edit** menu item
3. Select the **Cut** menu option

Hint: Use the scissors  on the toolbar instead of steps 2 and 3 to remove the selected column.

Rearrange Report Column Order

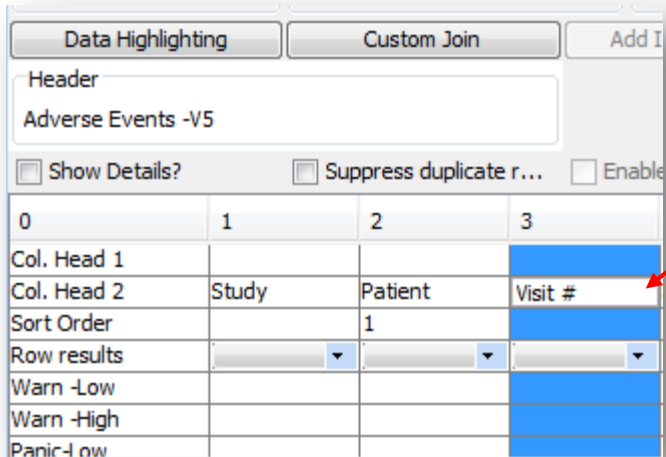

The screenshot shows a report configuration interface. At the top, there are several buttons: "Data Highlighting", "Custom Join", "Add Items", "Add All It...", "Filter Output", and "Create Re...". Below these buttons is a "Header" section with the text "Adverse Events -V5". There are also checkboxes for "Show Details?", "Suppress duplicate r...", "Enable Editi...", "Mark New ...", and "Autosize C...". The main part of the interface is a table with columns numbered 0 through 7. The table has several rows, including "Col. Head 1", "Col. Head 2", "Sort Order", "Row results", "Warn -Low", "Warn -High", and "Panir-1 ow". A yellow box with the number "1" and a red arrow points to the number "3" above the "Visit #" column, indicating the first step in rearranging the column order.

0	1	2	3	5	6	7	:

Setting Sort Order

- n Enter numbers in the Sort Order cells that correspond to the way the report output data is to be sorted. In this example, the output is sorted first on the patient position ID and then on the patient initials alphabetically.

Header		
Detail Data Listing		
<input type="checkbox"/> Show Details?	<input type="checkbox"/> Suppress dup	
0	1	2
Col. Head 1		
Col. Head 2	Patient	Patient Initials
Sort Order	1	2
Row results		
Warn -Low		

Chosen Order

Detail Data Listing - Subset of patients	
<input type="checkbox"/> Show Filter	<input type="button" value="Refresh"/>
Patient	Patient Initials
1010001	CDG
1010002	AS
1010003	ROMC
1010004	RJP
1010005	DMB
1010006	DGT

Report Output

- n In this example, the sort order numbers were reversed and now the output is sorted first on the patient initials alphabetically and then by patient position ID.

Header		
Detail Data Listing		
<input type="checkbox"/> Show Details?	<input type="checkbox"/> Suppress du	
0	1	2
Col. Head 1		
Col. Head 2	Patient	Patient Initials

Row results		
Warn -Low		

Chosen Order

Detail Data Listing - Subset of patients	
<input type="checkbox"/> Show Filter	<input type="button" value="Refresh"/>
Patient	Patient Initials
1010002	AS
1010001	CDG
1010006	DGT
1010005	DMB
1010004	RJP
1010003	ROMC

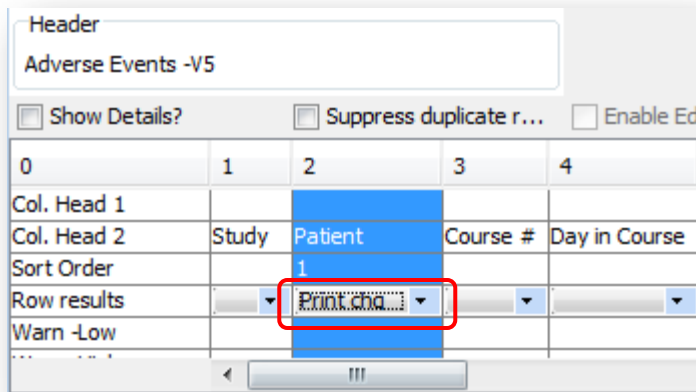

Report Output

Hints: Optional descending sort is specified by a trailing " D" after the sort order number.
Do not repeat numbers.

Print Change Enabled

- n On columns that have a sort order number, it is possible to select the "Print Change" option from the drop-down list as shown below.
- n Data will only display on the output when the value differs from the contents of the cell above.

Warning: Although it is a nice visual cue, sometimes this feature could misled the user into thinking a value is missing simply because its display was suppressed since it was the same and the one above. The other issue is that an empty cell is exported to the Excel spreadsheet making it hard to sort and filter in the data.

The screenshot shows a data table titled 'Adverse Events -V5 - Subset of patients'. The table has 7 columns: Study, Patient, Course #, Day in Course, Course, Date of Onset, and Date Resolved. The 'Patient' column is highlighted with a red box. The data rows show various adverse events for different patients and courses. The 'Print Change' feature is visible in the 'Patient' column, where some cells are empty, indicating that the value is the same as the one above.

Study	Patient	Course #	Day in Course	Prior	(MM-DD-YYYY)	(MM-DD-YYYY)
Study	Patient	Course #	Day in Course	Course	Date of Onset	Date Resolved
12_C_0047	1010003	101	6	N	02-28-2012	03-04-2012
12_C_0047		101	22	N	03-15-2012	04-05-2012

12_C_0047		101	3	N	03-17-2012	03-29-2012
12_C_0047		101	3	N	03-17-2012	04-05-2012

Print Change Disabled

- n To disable the Print Change feature, select the empty option from the drop-down as shown below.
- n The output will always show the contents of the cell and not suppress it.

The screenshot shows a configuration window for 'Adverse Events -V5'. It includes sections for 'Data Highlighting', 'Custom Join', and 'Header'. The 'Header' section contains the text 'Adverse Events -V5'. Below this are checkboxes for 'Show Details?', 'Suppress duplicate r...', and 'Enable'. A table below these options has columns labeled 0, 1, 2, 3, and 4. The 'Row results' row has a dropdown menu highlighted with a red box, which is currently empty. Other rows include 'Col. Head 1', 'Col. Head 2', 'Sort Order', 'Warn -Low', 'Warn -High', and 'Panic -Low'.

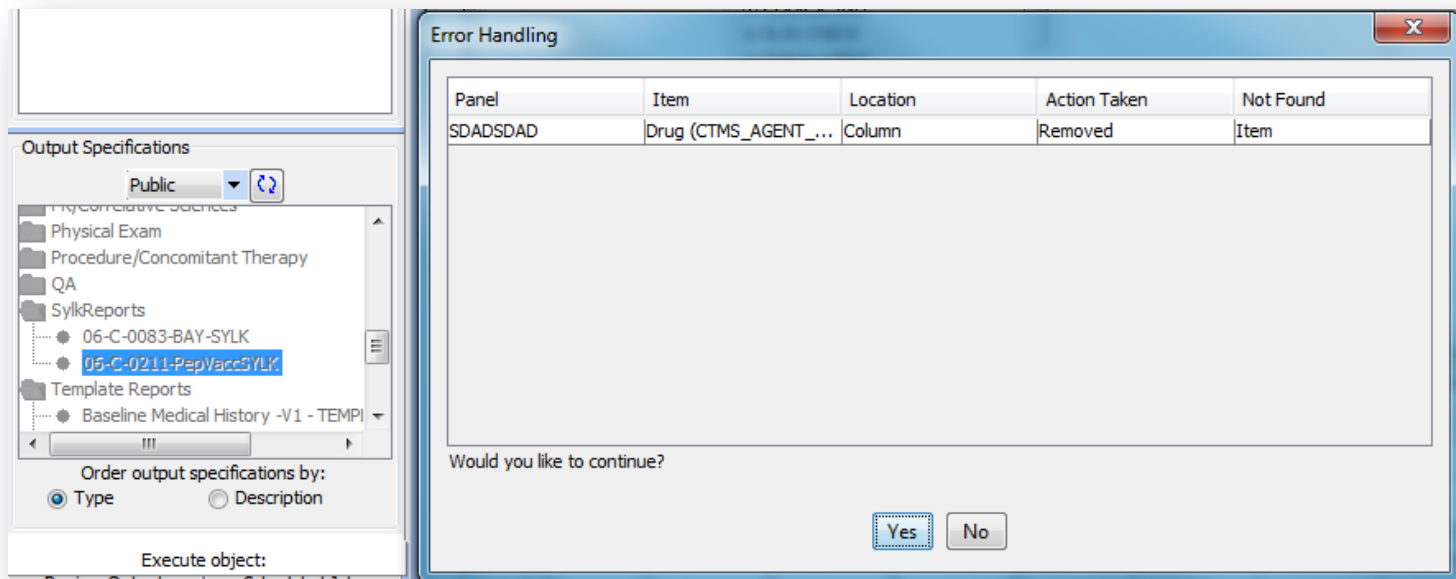

The screenshot shows a data table titled 'Adverse Events -V5 - Subset of patients'. The table has columns: Study, Patient, Course #, Day in Course, Course, Prior, (MM-DD-YYYY) Date of Onset, and (MM-DD-YYYY) Date Resolved. The 'Patient' column is highlighted with a red box. The table contains 20 rows of data.

Study	Patient	Course #	Day in Course	Course	Prior	(MM-DD-YYYY) Date of Onset	(MM-DD-YYYY) Date Resolved

12_C_0047	1010004	101	3		N	03-17-2012	04-05-2012

Handling a Panel Items Not Found in Saved Reports

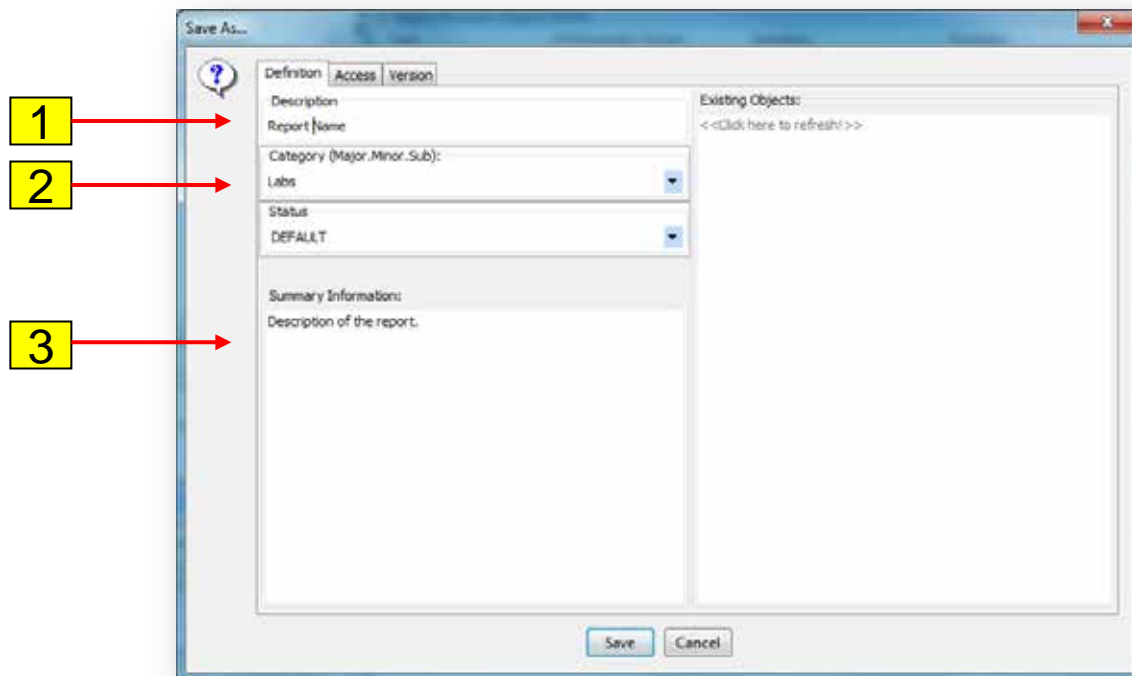

- n Some saved reports may contain items (questions) that are not applicable to a study.
- n When you try to execute or open such saved report, a warning message (see below) indicates which items are not found. These items are automatically removed.
 - Click **"Yes"** to proceed and load the rest of the report's items.
 - Click **"No"** to abort and not load/execute the report.
- n Optionally, these items can be replaced with the appropriate ones for your study.

Note: Review Filters and Patient Selection Criteria as well since items are also present there and could affect the result of the report.

Saving a Report

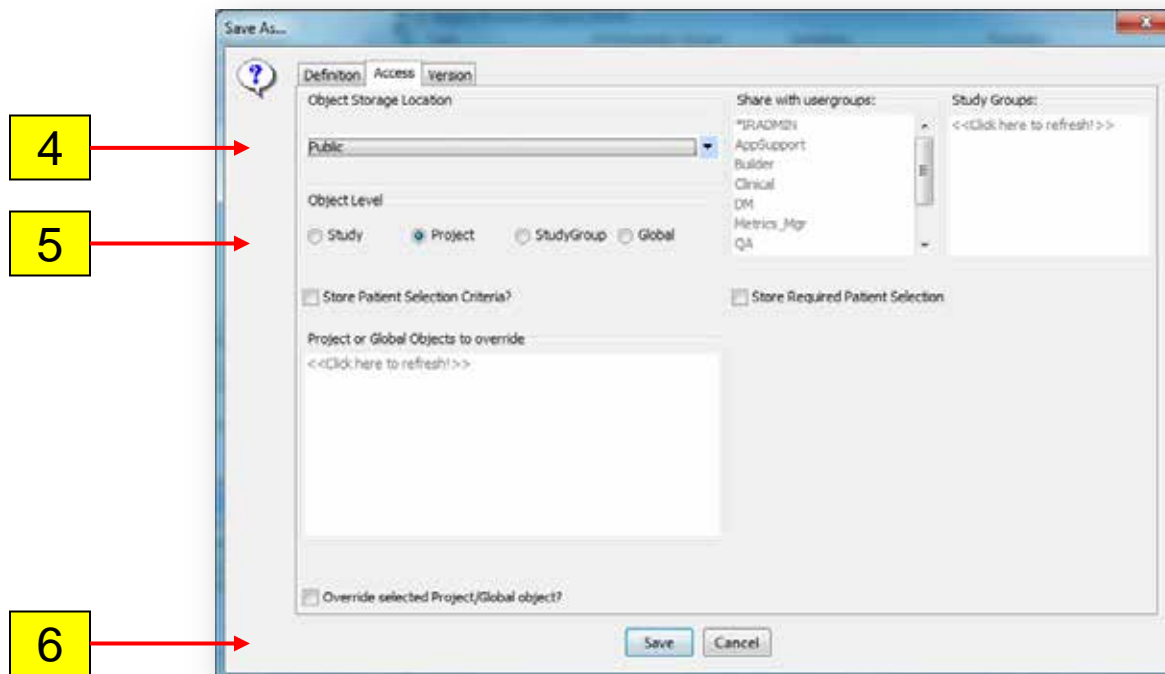

- n After making changes to the saved report, you are able to save it as a new report (necessary if you did not create the saved report) or update it (if you created it).
- n Click on the **File** menu item and then choose the **Save As** menu option to save the current report definition as a new report. Use the menu item **Save** to update the existing report.
- n Click on the **Definition** tab and enter:
 1. The report name in the **Description** box;
 2. Select a folder from the **Category** drop-down list (or type in the name of a new folder);
 3. Enter a brief description about the report in the **Summary Information** box.

Saving a Report

- n Click on the **Access** tab and select:
 - 4. Choose whether the report will be **Private** (only accessible by you) or **Public** (accessible to all user with access to the study) from the **Object Storage Location** drop-down list;
 - 5. Choose the **Object Level** radio button **Study** to make the report only be available in the currently selected study; or choose **Project** to make the report available to all studies associated with the current **PI** selected;
 - 6. Click on the **Save** button.

Hint: After saving a new report that was based on an existing report, it is advisable to open the newly saved report if you will continue modifying it.

Creating ad hoc Reports

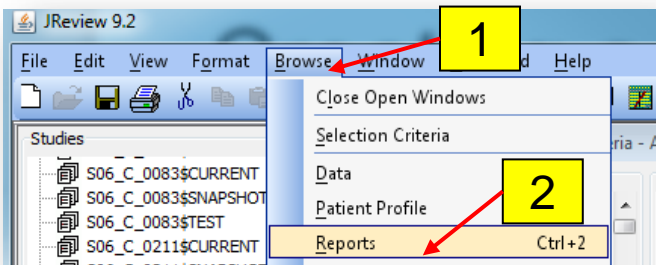

Module 3 Outline

- n Report Browser
- n Creating New Reports
- n Difference Between Actual and Decoded Values
- n Choosing Date Format
- n Demo

Report Browser

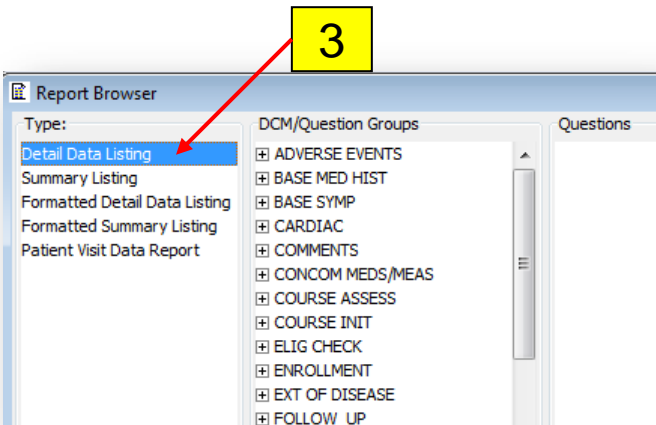

- n Report Browser has two basic report types:
 - Detail Data Listing – Lists details of selected questions from one of more CRFs.
 - Summary Data Listing – Allows for displaying counts, averages, minimum and maximum values without the details.
- n Output of these reports are shown in a grid layout and can be exported to an Excel spreadsheet.
- n Their "Formatted" counterparts show data in a layout that can be exported to a PDF file.
- n **Detail Data Listing** is the most used report type.

Creating a Detail Data Listing Report

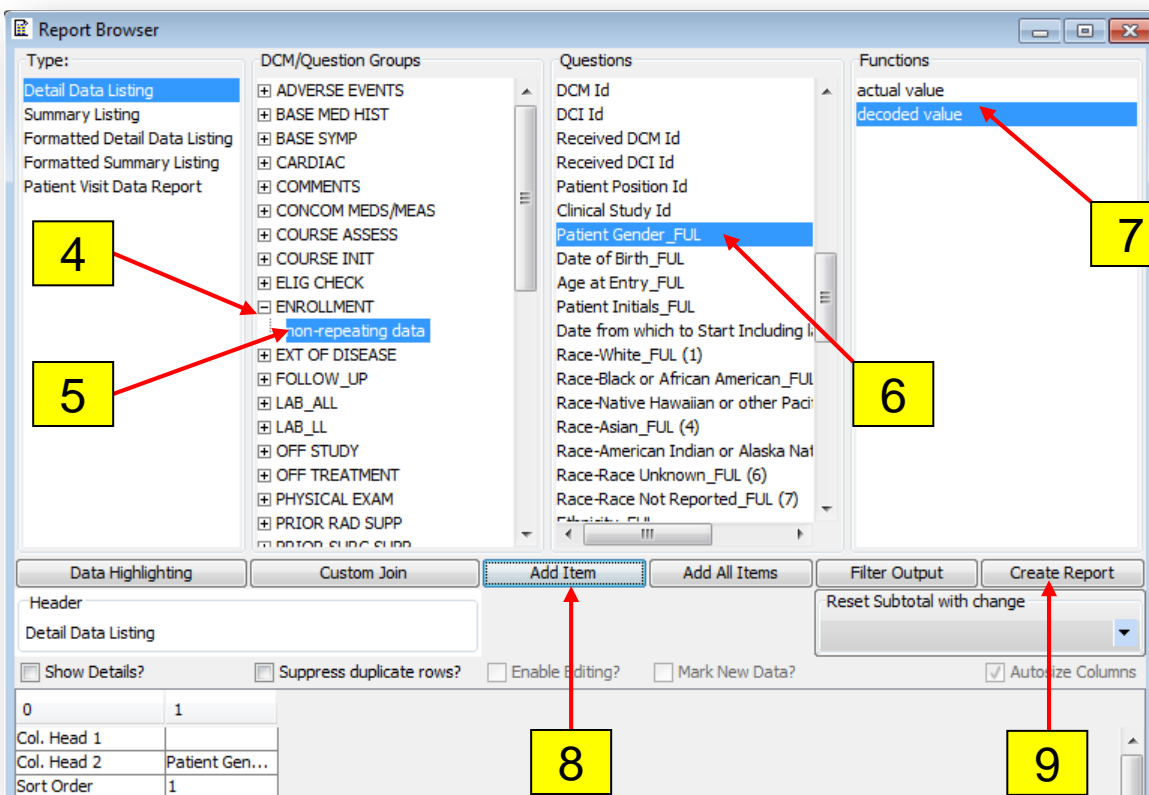

1. Click on the **Browse** menu item;
2. Click on the **Reports** menu option.

Hint: Optionally, click on the  toolbar icon to open the Report browser.

3. Click on the **Detail Data Listing** Type.

Creating a Detail Data Listing Report

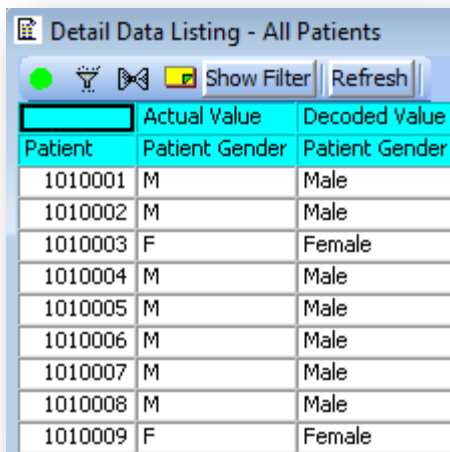

4. Expand the **Enrollment** DCM;
5. Click on the **non-repeating data** Question Group;
6. Click on a desired **Question**;
7. Click in one of the **Functions**;
8. Click on the **Add Item** button to add the Question to the report;
 - 9. Repeat steps 4-8 to add additional questions to the report;
9. Click on the **Create Report** button to run the report and view the output.

Note: "Actual Value" should be highlighted under function unless the question:

- a) is a date question, then choose desired date format;
- b) has a pick list in C3D CRF, then "Decoded Value" is automatically selected.

Actual versus Decoded value

	Actual Value	Decoded Value
Patient	Patient Gender	Patient Gender
1010001	M	Male
1010002	M	Male
1010003	F	Female
1010004	M	Male
1010005	M	Male
1010006	M	Male
1010007	M	Male
1010008	M	Male
1010009	F	Female

- n **Actual Value:** is the actual representation of a data point entered in a C3D CRF and stored in the database.
- n **Decoded Value:** is the long description of the actual value. It is available for questions which have pick lists in C3D.
- n JReview selects the decoded value by default.

Date Formats

Available Date Functions

0	1	2	3	4	5
Col. Head 1		Actual Value	Oracle date	Oracle date ...	Oracle date ...
Col. Head 2	Patient Initials	Date Inform...	Date Inform...	Date Inform...	Date Inform...
Sort Order	1				
Row results					
Warn -Low					
Warn -High					
Panic-Low					

Sample output

The screenshot shows a window titled 'Detail Data Listing - All Patients'. It has a toolbar with icons for search, filter, and refresh, and buttons for 'Show Filter' and 'Refresh'. Below the toolbar is a table with the following data:

	Actual Value	Oracle date	Oracle date (mm-dd-yyyy)	Oracle date (dd-mm-yyyy)
Patient Initials	Date Informed Consent Signed	Date Informed Consent Signed	Date Informed Consent Signed	Date Informed Consent Signed
BAF	20110819	19-AUG-11	08-19-2011	19-08-2011
BFD	20110527	27-MAY-11	05-27-2011	27-05-2011
BJD	20110708	08-JUL-11	07-08-2011	08-07-2011
CAF	20110502	02-MAY-11	05-02-2011	02-05-2011

- n Actual value (yyyymmdd) (ex: 20060422)
 - Use this when date sort is needed.
- n Oracle Date (dd-mon-yy) (ex: 22-APR-06)
 - If used and partial dates exist for the question, then JRreview will show an error message.
 - Note: Same format shown in C3D RDC.
- n Oracle Dates (mm-dd-yyyy (ex: 04-22-2006) and dd-mm-yyyy (22-04-2006))
 - Allows for date calculations in Excel.
 - **Note:** Do not use this format when sorting dates.

Important Reports Considerations

- n When using multiple CRFs in a report, select CRFs in the same chronological order as they would have been filled out according to the protocol schema.
 - For example: Enrollment, Course initiation, AE, Course Assessment, Off-Treatment
- n JReview "knows" how to put together data from different CRFs
 - By patient position and sometimes by course as well.
- n Watch out when combining questions from two or more repeating groups
 - **Results in a Cartesian Product!**
- n Note on reports with Course End Date for patients still on treatment:
 - C3D defaults the current (ongoing) course End Date to "August 15 3501" date.

Module 3 Demo

n DEMO

- Create a Detail Data Listing with questions from different CRFs and using Actual/Decoded value and the various Date Formats.
- Save the report.

JReview Module 4

Filters and Patient Selection Criteria

Module 4

- n JReview Terminology
- n Patient Selection Criteria
- n Filters
- n Demo

JReview Terminology

- n Patient Selection Criteria – Specification of how to subset the patient population based on their data.
Ex: (Female Patients) Gender = "F"
 - Can be saved as part of the report or independently (Patient Subset).
- n Patient Subsets – Saved Patient Selection Criteria! Re-usable across reports.
 - Listed between studies and output specification sections
- n Filter – Criteria specified as part of a report and used to include or excludes data (rows or records).
Ex: AE Grade >= 3
 - Automatically saved with the report.

Note:

- n If you do not use a patient selection criteria, or patient subset, your reports will include data from all the patients for the Study Sites you have access to.

Create a Patient Selection Criteria

The screenshot shows the 'Patient Selection Criteria' window with the following elements and callouts:

- 1**: DCM/Question Groups list (ENROLLMENT, non-repeating data, etc.)
- 2**: Questions list (Clinical Study Id, Patient Gender_FUL, etc.)
- 3**: Functions list (actual value, decoded value)
- 3**: Operator list (=, <>, <, >, <=, >=)
- 4**: Display Values button
- 5**: Value in the Display Values pop-up window (Female, Code F)
- 6**: ADD expression button
- 7**: OK button
- 8**: Update Browsers button

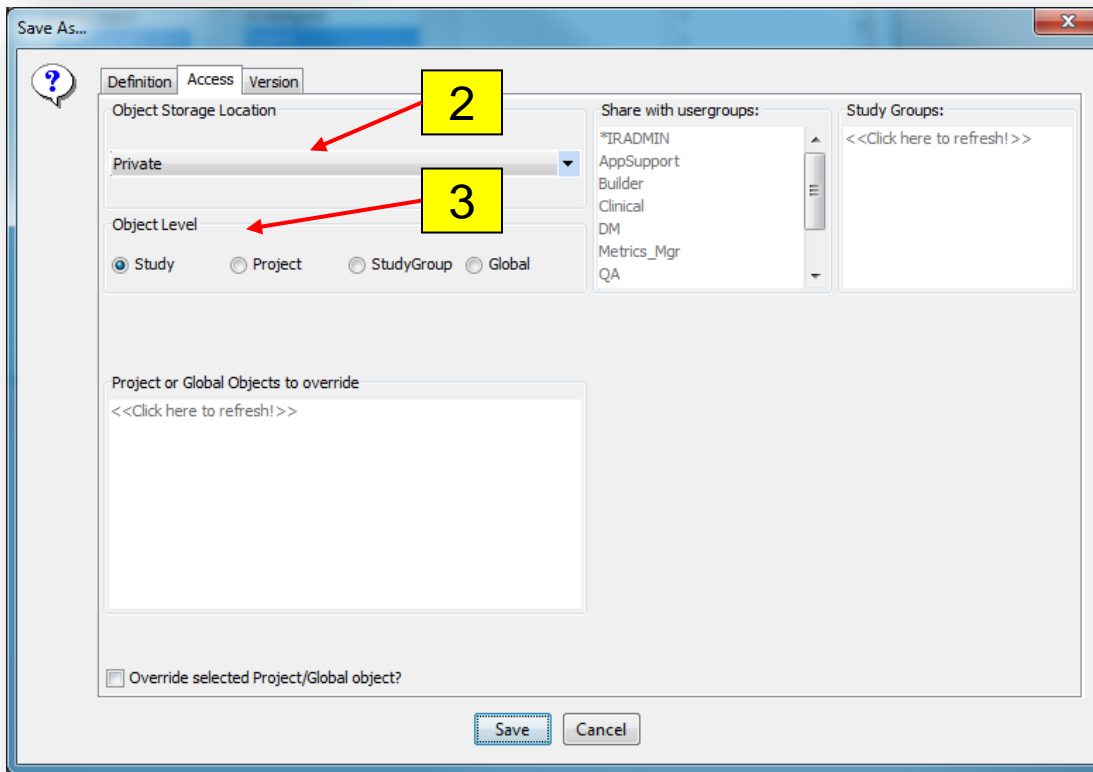

The 'Display Values' pop-up window contains the following table:

decoded value	Code
Female	F
Male	M

Select the Patient Selection Criteria window and then:

1. Expand the **DCM** in the **DCM/Question Groups** list and select the **non-repeating data** Question Group;
2. Click on a **Question** to select it;
3. Click on an **Operator**;
4. Click on the **Display Values** button;
 - Window shows up listing values for the selected question
5. Click on the **desired value** to select it;
 - To choose multiple values, hold down ctrl key when selecting values
6. Click on the **ADD expression** button;
7. Click on the **OK** button when done
 - Repeat steps 1-6 to add criterion using other questions.
8. Click on the **Update Browser** button to activate Patient Selection Criteria

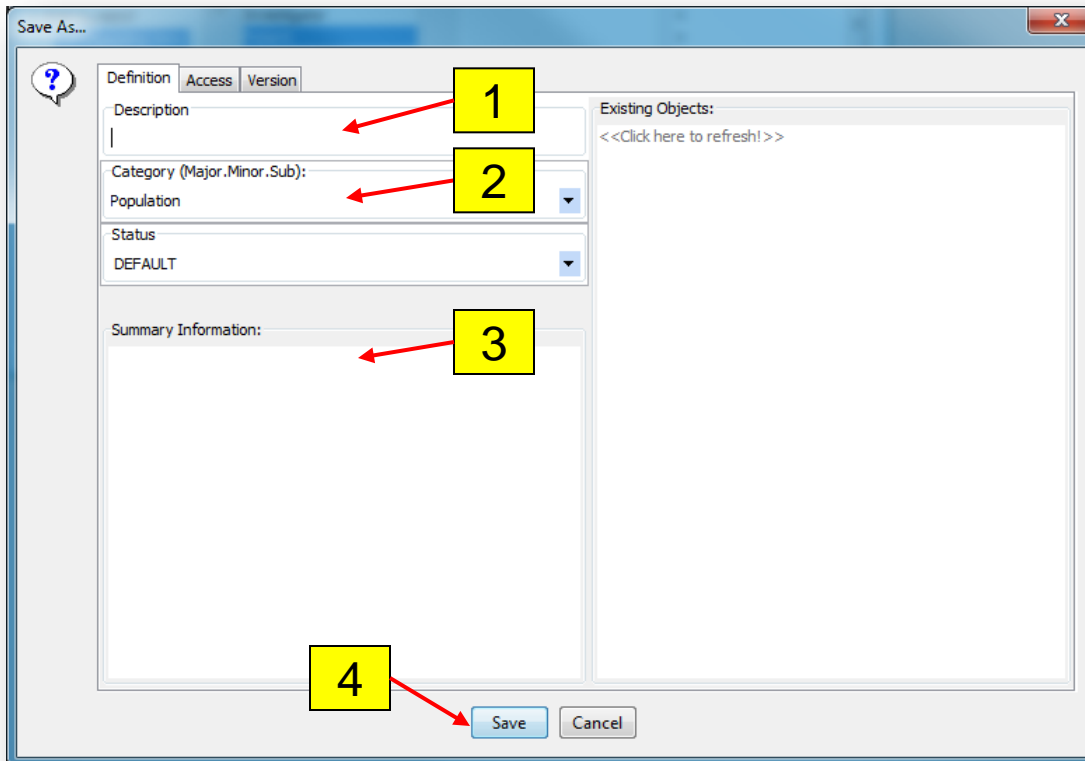

Save a Patient Selection Criteria

Select the Patient Selection Criteria window and then:

1. Select the **File** menu item and then the **Save** menu option.
2. On the **Access** tab, select a **Project Storage Location** drop-down list:
 - a) **Private** – Only you will have access to the saved Patient Selection Criteria.
 - b) **Public** – Everyone with access to the selected study will have access to the saved Patient Selection Criteria.
3. Then select the **Object Level**:
 - a) **Study** – Patient Selection Criteria will only be available to the selected study
 - b) **Project** – Patient Selection Criteria will be available to all the studies associated with the PI (folder that groups the studies.).

Save a Patient Selection Criteria

Then click on the **Definition** tab and:

1. Enter the **Name** of the Patient Selection Criteria being saved in the **Description** area.
2. Select a **Category** from the drop-down list. Category is the folder name where the criteria will be saved. A new Category can be created by typing in a new folder name.
3. Optionally, enter a brief description of the Patient Selection Criteria in the **Summary Information** area.
4. Click on the **Save** button.

Note: You cannot update or delete a Patient Subset that was not created by you.

Saving Patient Selection Criteria with a Report

Save

Definition Access Version

Object Storage Location: Public

Object Level: Study Project StudyGroup Global

Store Patient Selection Criteria? Store Required Patient Selection

Share with usergroups: *TRADMIN, AppSupport, Builder, Clinical, DM, Metrics_Mgr, QA

Study Groups: <<Click here to refresh! >>

Project and Global overrides are not available while saving over an existing object

Save Cancel

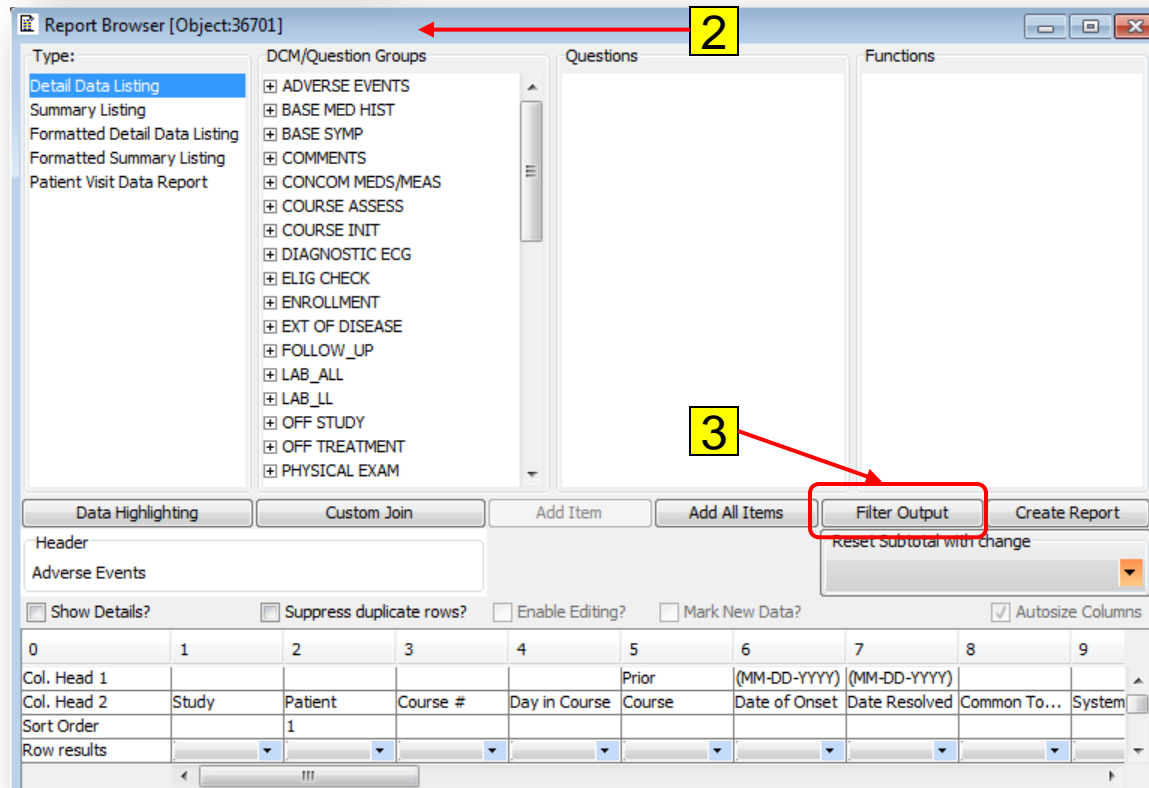

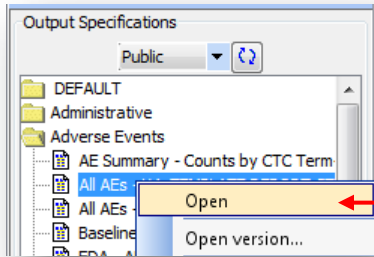

- n While Filters are automatically saved with the Report, a Patient Selection Criteria is not.
- n When saving a Report, check the **Store Patient Selection Criteria?** option on the **Access** tab to save the Criteria as part of the report.
- n Next time the Report is opened or run, the Patient Selection Criteria loads and the report only runs for the patients that satisfied the criteria.

Filter Output

- n Filter Output is a criteria used to select which data from a CRF should be included in the Report's output (undesired rows are not included in the report output)
- n Filter Output is always saved as a part of the report.
- n The Patient Selection Criteria and Filter Output can be used together or individually to meet your needs.

Create and Save a Filter

1. If the Report you want to set the Filter Output is not open, locate the report in the **Output Specification** area, right-click on the report's name and select the **Open** option.
2. If the Report is already open, then select the **Report Browser** window.
3. Click on the **Filter Output** button.

Create and Save a Filter

The screenshot shows the 'Output Filter' window with the following components:

- DCM/Question Groups:** A tree view with 'Adverse Events' selected (1).
- Questions:** A list with 'Grade_FUL' selected (2).
- Functions:** A list with 'decoded value' selected (3).
- Operator:** A list with '>=' selected (4).
- Buttons:** 'Save Filter', 'ADD expression', 'Display Stats', 'Display Values', 'Item Compare', and 'Define Parameter'.
- Result Filter (Text):** 'Adverse Events.Grade_FUL >=Sever...' (9).
- Result Filter (SQL):** 'T0.AE_SEV_GD_FUL >='3'.

The 'Display Values' dialog shows a table with the following data:

decoded value	Code
Life Threatening or Disabling Adverse Event	4
Mild Adverse Event	1
Moderate Adverse Event	2
Severe Adverse Event	3

The 'Severe Adverse Event' row is selected (6). The 'ADD expression' button is highlighted (7), and the 'OK' button is highlighted (8).

1. Select a **DCM/Question Group**;
 2. Select a **Question**;
 3. Select a **Function**;
 4. Select an **Operator**;
 5. Click on **Display Values** button to show the list of values stored in the database for this study;
 6. Click on the desired value to select it;
 - o To choose multiple values, hold down ctrl key when selecting values
 7. Click on the **ADD expression** button;
 8. Click on the **OK** button when done;
 - o Repeat steps 1-6 to add criterion using other questions
 9. Click on the **Save Filter** button to enable the filter.
- Note:** On the **Report Browser** window the **Filter Output** window has now changed to **Filter is On** indicating a filter has been set on the report.

Patient Selection versus Filter

- n Patient Selection Criteria = Patient positions selected
 - .. Ex: Patients with Arm A in Course Initiation CRF. Patients 1, 7 and 22, which have Arm A are selected and report runs only for these Patients.
- n Filter Output = Observation level subset
 - .. Ex: Patient with Serious AEs. Only patients that have at least one Serious AE are selected and report runs only for these Patients.

Module 4 Demo and Exercises

n Demo

- .. Using the previously created report with enrollment and AE questions create the following:
 - n Create a filter for AEs \geq grade 3
 - n Create Patient selection criteria for "Male"
 - n Generate report for "Male" patients with AE \geq grade 3

Questions???
