

USER GUIDE FOR RAVE LLI

Created By: Milind Bendigeri

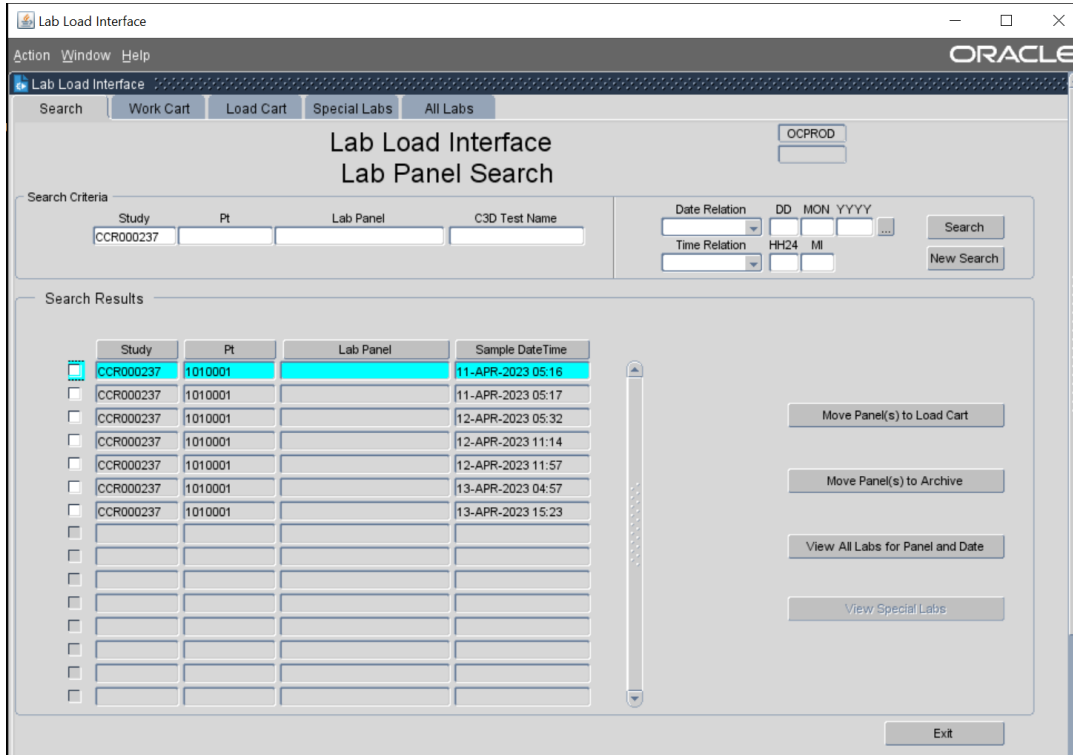

Login URL: <https://oc trials.nci.nih.gov/opa54/LabLoadInter.htm>

Selecting Labs to load into the cart.

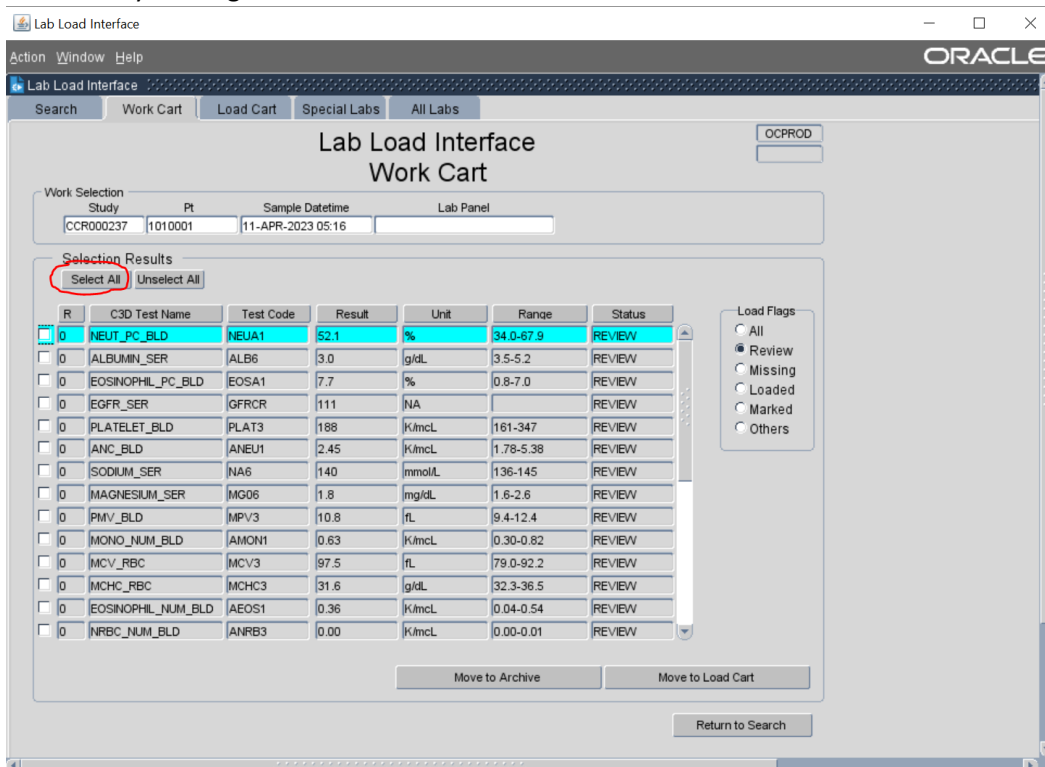

- 1) Input the Study that you want to query labs to be Reviewed. (CCRXXXXXX) You can click on the Dropdown button to show the list of Studies which have labs in Review Status or you can fill in the study and click on the search button. If nothing is shown it means there are no labs for you to Review.

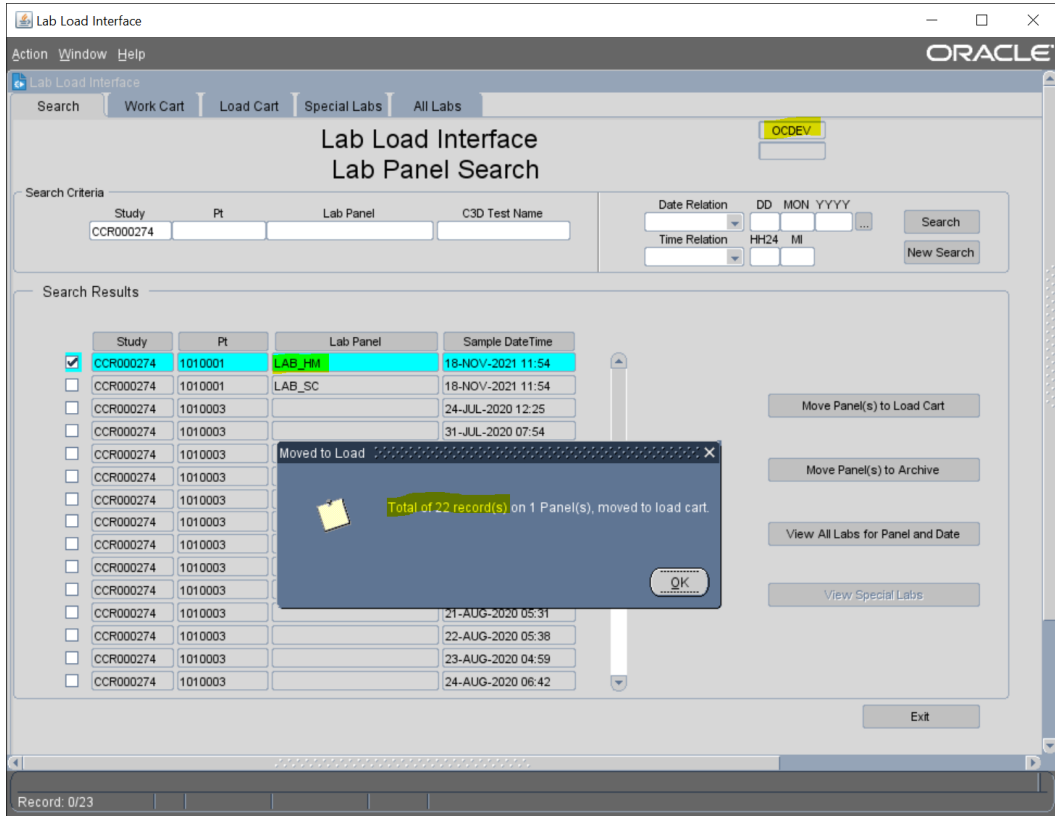

- 2) Once you select a study and click on 'Search' button you will see the results in the Search Tab. These are separated by the Sample DateTime.

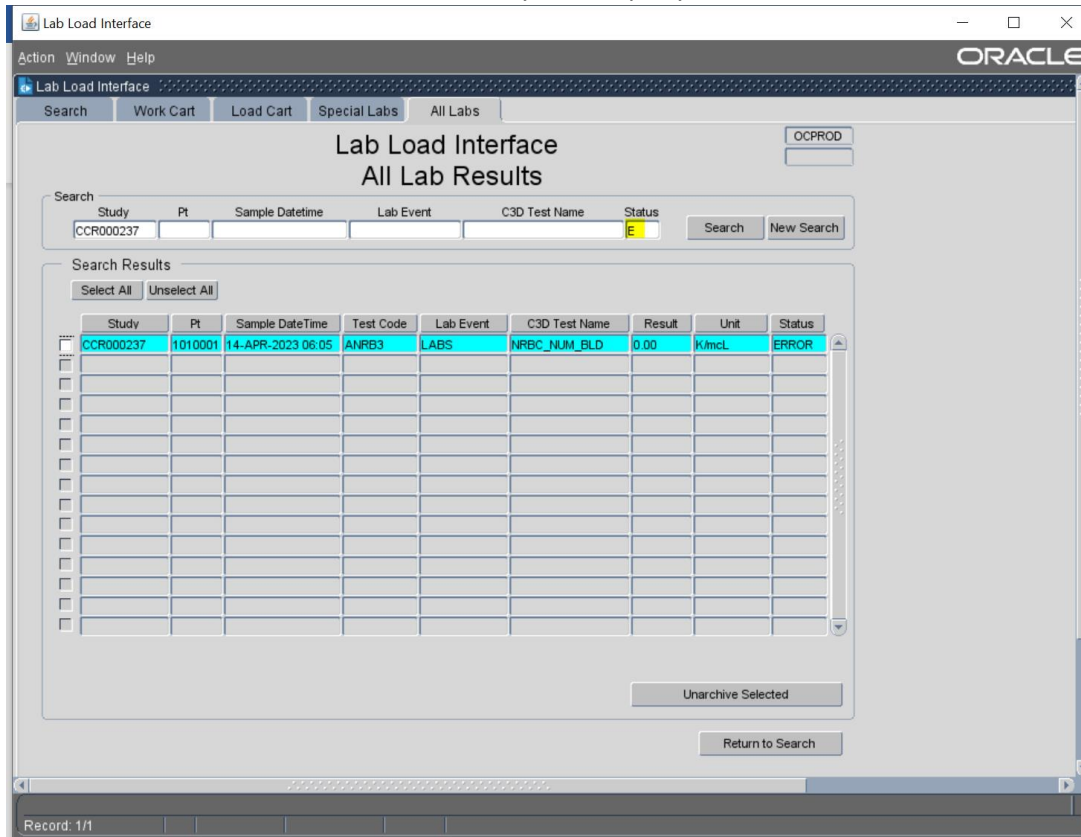

- 3) When you highlight a record here and click on Work Cart (See 2nd tab on top) you will see all the labs for that sample_datetime and will be able to 'Select All' as shown in the snippet below. You can select the needed labs as well can click on 'Move to Load Cart' to mark the labs for loading. Alternatively, you can select labs to be Archived by clicking on the 'Move to Archive'.

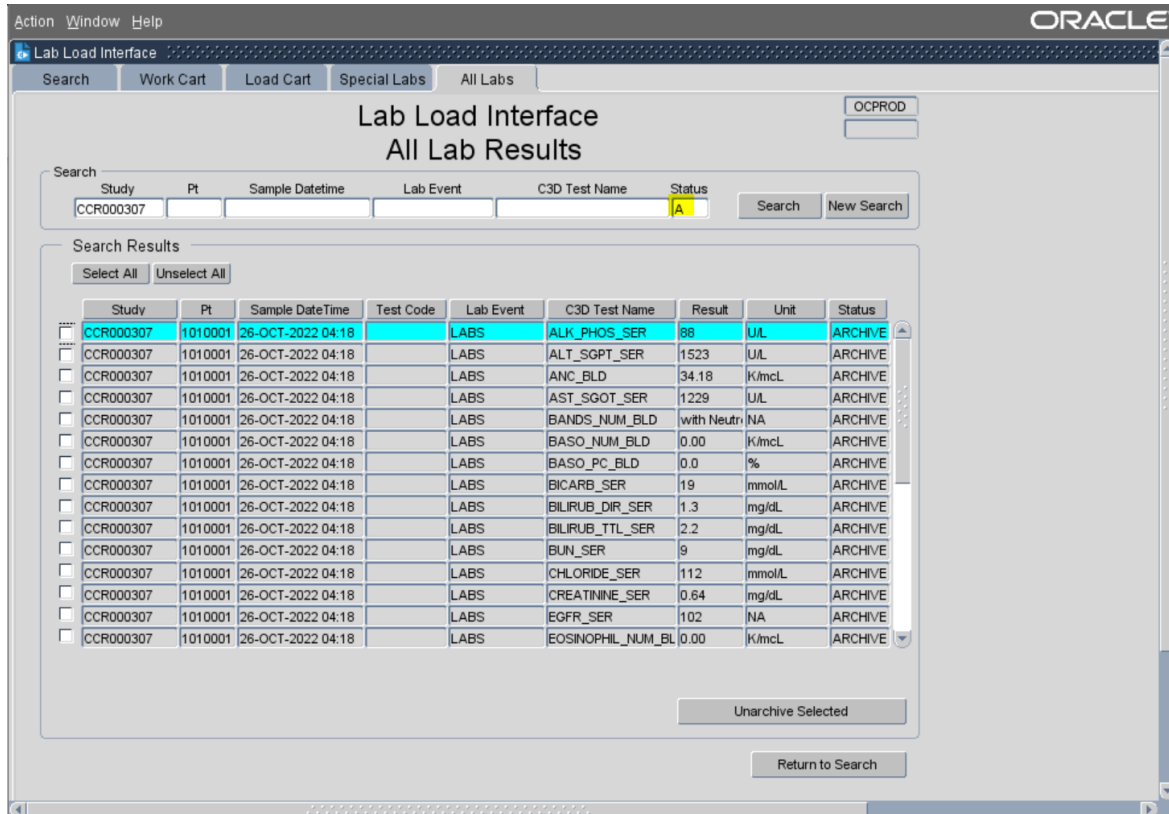

Once you click on the Move to Load Cart button it should show you the number of labs moved to the Load Cart like shown in the snippet below:

4) To check on the labs that have errored out you can query in the 'All Labs' tab. See an example below.

5) To UnArchive previously Archived Labs click on 'All Labs' tab and query for Archived Labs as shown below:

Select the labs that you want to UnArchive and click on 'UnArchive Selected'. The popup should show how many labs were UnArchived. The Unarchived labs are 'Reset' in the Database and the next time the Lab Loader runs these labs are re-processed and set to Review or Error based on various criteria for the Study. So once you UnArchive a lab it may take 2-3 days for the labs to show up in LLI.
